Certified Ethical Hacker and Cybersecurity Analyst with expertise in Penetration Testing, GRC Frameworks, and Digital Forensics. Passionate about leveraging hands-on threat research to build robust and compliant security defenses.

EDUCATION

Bachelor's Degree in Cybersecurity, Arab Open University 2022 – 2026

PROFESSIONAL EXPERIENCE

DEPI, Digital Forensics-Hybrid Training Dec 2025 – Jun 2026

- Mastered secure evidence acquisition and strict chain of custody protocols
- Successfully extracted and analyzed data using industry-standard forensic software.
- Skillfully recovered hidden and deleted artifacts from complex file systems.

WE Innovate, GRC-Bootcamp Aug 2025 – Sep 2025

- Completed an intensive, project-driven training program focused on bridging enterprise security governance with technical architecture.
- Developed comprehensive cybersecurity documentation, demonstrating practical application of Information Security Governance, ISO 27001 compliance, and risk assessments.
- Designed secure enterprise environments by integrating Identity and Access Management (IAM), endpoint security, and Business Continuity Management (BCM).

Eye Advertising, Part-Time Internship Jan 2024 – Jun 2024

- Developed and administered 3 local WordPress websites
Managing backend configurations and system updates.
- Hardened web assets against vulnerabilities by implementing strict security controls
- Analyzed and resolved backend technical issues to ensure secure functionality.

CERTIFICATES

Certified Ethical Hacker — EC-COUNCIL | **Certified In Cybersecurity** — ISC2 | **Cybersecurity For Beginners** — ITI

PROJECTS

ISMS & Security Framework

- Designed an ISO 27001-aligned ISMS framework to secure core financial systems and customer data.
- Executed risk assessments to identify, evaluate, and develop treatment plans for critical cyber threats.
- Mapped compliance gaps across local and international regulatory frameworks.
- Developed a core security policy stack and implemented a risk-based awareness training matrix.

Ransomware PoC

- Developed a ransomware PoC to research low-level file encryption and directory traversal behaviors.
- Engineered a custom Assembly cryptographic engine for high-speed, in-memory XOR transformations.
- Designed a C++ wrapper to manage recursive directory scanning and system read/write operations.
- Restricted execution to user-level privileges on Linux and Windows to prevent core OS corruption.

SKILLS

GRC Concepts

ISO 27001, Risk Assessments
Compliance Auditing, BCP

Penetration Testing

Nmap, Burp Suite, Metasploit
Hashcat, Acunetix, Kali-Linux

Digital Forensics

Volatility, Splunk, Autopsy
Wireshark, FTK Imager

Programming languages

C, C++, x86 Assembly
Python, Bash, MySQL, PHP

Web development

HTML, CSS, JavaScript, Wordpress

Network Management

CCNA, Network security
